**Note:** Load carrying vs lift height relationship shown by colour code on the mast photograph.

In accordance with VDI guidelines 2198 resp. 3597 this specification applies to the standard model only. Alternative tyres, mast types, ancillary equipment, etc. could result in all the values.

Suffix in model type = Initial lift incorporated
Tough - everywhere.
STILL’s EXV range comes in an all-new, up-to-the-minute yet functional design that’s even easier to use and more manoeuvrable, with higher load carrying capacity and longer work cycles for each battery charge. The EXV models have increased strength in the areas prone to impact damage and the extremely durable cover is manufactured from high-strength, shock adsorption material and offers excellent accessibility for servicing and maintenance. A powerful high lift pallet stacker with minimum operating costs, it provides the right solution for industrial, service, wholesale and general trade applications. The EXV is offered in two load classes - light, of 1 t or 1.2 t where pallet turnover is low to moderate, and heavy, of 1.4 and 1.6 t, for high pallet turnover.

Maximum reliability.
STILL’s entire EXV range is characterised by:
- Damped lowering on all lifting unit systems to protect the load.
- Extremely robust fork tips with a round-tipped wedge shape for better pallet insertion.
- Wider track provides greater load-bearing and stability.
- The variable drive controller (a proven MOSFET microprocessor controlled electronic power pack) offers speeds from rapid travel through to very sensitive movement for delicate loads.
- Automatic braking on drive switch release. With special preparation the EXV is fully ready for work in cold stores – and the resulting temperature changes – to as low as -30 °C.

Made to work.
- Placing the load’s centre of gravity between the drive and the running wheels achieves high carrying capacity without a counterweight.
- The smallest working aisle widths on the market, thanks to compact construction, guarantees good manoeuvrability.
- The wide clear-view lifting mast and offset tiller offer the best visibility for both load transportation and stacking.
- Rocker mounting of the tandem rollers further increases driving comfort and facilitates movement over rough ground and thresholds. Ground clearance can be increased to 130 mm using the initial lift

EXV 10/12/12 I Technical Data.
The initial lift function of the EXV 12 I makes it suitable for use on uneven ground conditions or on ramps.

Design.
- The modern, functional design and the optimal ergonomics of the tiller make this truck a great all-rounder for a multiplicity of applications.
- Various storage compartments are incorporated in the new, extremely strong polyurethane cover.

Steering.
- Smooth manoeuvring achievable in the tightest of spaces.
- A gas-spring strut quickly and smoothly brings the user friendly tiller to the vertical brake position after releasing.
- With an offset drive and castor wheel, the high lift pallet stacker is a safe and stable 4-wheel truck.

Tiller.
- Ergonomic layout of the controls means the EXV 12 I is suitable for both right and left handed operators. The push buttons for lifting/lowering and horn are within fingertip reach and allow single handed operation without changing grip. This feature greatly reduces operator fatigue.
- The large buttons have grooves and raised contours to provide a problem free, tactile “Feel the function” response – even when working with gloves.
- The arrangement of the electronic controls permits the simultaneous use of the control elements and functions, e.g. Lifting and driving.
- Safety for the hands when on the tiller is achieved by the wrap-round protection and the curved shape of the handle.
- The control elements in the tiller are protected to IP 65 and all connectors and wiring harnesses are protected to IP 54; they are therefore well protected against environmental influences such as rain or dust.
- Extremely robust tiller head is achieved by the use of glass-fibre reinforced Polyurethane and a cast aluminium tiller arm.

Drive.
- Maintenance and wear-free, the totally enclosed 1.2 kW three-phase alternating current (AC) drive offers high performance to the user for in-plant handling and transportation tasks. The modern AC drive controller provides improved traction control for the user, e.g. noticeably powerful acceleration and drive. The drive characteristics can be easily programmed by STILL Service to suit the user’s specific requirements.
- A speed sensor, which is connected to the control unit, provides gentle, progressive acceleration of the EXV 12 I up to maximum speed, independent of the load on the forks.
- Braking is activated in the driving mode by releasing the driving switch. The AC motor acts as a generator and recovers energy during deceleration.
- With the ‘Hold on Ramp’ feature, when the drive switch is released, the controller monitors truck movement and prevents uncontrolled roll-back by applying the motor brake.

Mast.
- STILL offers the 1.2 t capacity truck with Tele and full free-lift masts. In addition, the EXV 12 and the EXV 12I can now be fitted with a triple mast allowing configuration to be perfectly matched to the application.
- The newly designed masts and fork carriage are characterised by their extreme rigidity and robustness. Deeper profiles on the external mast (108 mm), the visibly increased width of the mast as well as the strengthened connection of the forks to the fork carriage, minimise the possible deflection of the forks and mast when loaded.

* Not EXV 10 basic
Hydraulic System.
- The newly developed pulse control responds sensitively to the lightest touch on the control button to give precise load positioning.
- Electronic control of the hydraulic pump motor gives stepless and proportional response.*
- An enclosed motor drives a high pressure gear pump.
- Responsive, light-touch buttons control lifting and lowering speeds.
- Maximum pressure relief valve, lowering valve and line break safety devices protect the hydraulic system.

Braking System.
The truck features two independent brake systems:
- Soft braking with energy recovery is activated by releasing the butterfly drive control switch or selecting the opposite direction.
- The dust-protected electromagnetic disk brake acts as a safety and parking brake. Braking takes place automatically when the tiller is positioned horizontally or vertically (dead-man brake).

Battery.
- The EXV 12 i can be optionally equipped with an integral battery charger.
- The drive control technology and the low energy requirement resulting from it enable the use of smaller capacity batteries while still providing longer hours of use.
- The battery is easily accessible and can be changed by means of a hoist.
- The EXV 12 i is equipped with a new battery compartment which enables the use of batteries from 165 to 225 AH capacity.

Initial lift (optional).
- Increases the ground clearance to 155 mm (130 mm lift) making it possible to drive over uneven floors and changes of gradient.
- Allows the machine to be used as a pallet truck with pallets up to 1200 kg.

Options.
- Fork length: Length/Width =1000/180 mm is possible as an option.
- Different tyres: Treaded and/or non-marking tyres are available.
- Combi instrument for battery charge and operating hours which also incorporates a service error code display.
  (Standard on EXV 10/12)
- Integrated battery charger.
- Load backrest.
- Cold store protection to -30 °C for EXV 10/12.
- Colour-coded indicator affixed to the mast to indicate the residual capacity relative to the lift height.
- Mast safety protection screen made from polycarbonate.

OPTISPEED 3.0 (Optional on EXV 10 / not available on EXV Basic).
With the latest development of the AC controller in combination with a dual safety angle sensor in the tiller, STILL has incorporated an innovative and ergonomic safety function:
- Depending on the angle of the tiller, the speed is automatically controlled. Thus with the tiller almost vertical, slow travel is achieved, which makes manoeuvring in confined areas very simple and safe. Also, the possibility of the machine being driven over the operator’s feet is virtually eliminated.

EXV 10 Basic Technical Data.
The entry model EXV 10 basic is particularly suitable for load handling to the first beam height, and thus offers sound and proven technology which is easy to operate.

Design.
- The EXV 10 Basic features modern and user-friendly design, as well as the ergonomic STILL tiller.
- Various storage compartments are incorporated in the strong plastic cover

Steering.
- With an offset drive and castor wheel, the high lift pallet stacker is a safe and stable 4-wheel truck.

Tiller.
- The EXV 10 Basic is equipped with the ergonomic and IP 54 protected STILL tiller.

Drive.
- The EXV uses a wear and maintenance-free, totally enclosed 1.2 kW three-phase alternating current (AC) drive motor which provides excellent driving characteristics.

Mast.
- The EXV 10 Basic can be equipped with two alternative mast heights.
- The sound and proven technology permits storage up to the first beam level, supported by an easy to operate hydraulic system.

Options.
- Combi instrument for battery charge and operating hours, which also incorporates a service error code display.
- Integrated battery charger.
- Load backrest.
- Cold store protection to -30 °C for EXV 10/12.

Safety.
- The vehicles conform to the Machine Directive 98/37/EG and carry the CE mark. STILL is certified to ISO 9001.
ancillary equipment, etc. could result in different values. In accordance with VDI guidelines 2198 or 3597, this specification applies to the standard model only. Alternative tyres, mast types, and auxiliary equipment, etc., could result in different values.

In accordance with VDI guidelines 2198 or 3597, this specification applies to the standard model only. Alternative tyres, mast types, and auxiliary equipment, etc., could result in different values.
High Lift Pallet Truck EGV 14/16.

Design.
- With functional design and optimal ergonomics, these trucks are good all-rounders for a multiplicity of applications.
- Storage compartments are incorporated into the cover, which is made of extremely strong polyurethane.
- Sturdy chassis made of thick walled sheet steel is a match for the hardest of applications.

Steering.
- Lighter steering and ergonomically weighted tiller makes for easy manoeuvring in the tightest spaces.
- A gas spring takes the user friendly balanced tiller handle quickly into the vertical braking position when it is released.
- The offset drive wheel and auxiliary swivel castor mean that this high lift pallet truck is a stable 4-wheel vehicle.

Tiller.
- Tiller head made of extremely strong, impact resistant plastic.
- Ergonomic layout of the controls, suitable for right or left handed operators. The push buttons for the signal horn, hoisting, lowering and initial lift can be operated using one hand without changing grip.
- Wear free switching technology for the travel, hoist and lower functions, plus installation of components and wiring harnesses to enclosure class IP 65, guarantee years of reliability.
- The anatomically shaped impact switch in the tiller head prevents the operator getting trapped even when the tiller is almost vertical. The EGV will switch immediately from forward to reverse travel if the impact plate touches the operator. In this way the truck automatically moves away from the operator and then comes to a stop.

Drive.
- Comfortable, economical and hence cost saving operation, thanks to an electronic controller with MOSFET technology.
- Sensitive driving, independent of load, by virtue of the remotely excited shunt wound motor.
- The trucks will start smoothly and accelerate evenly up to maximum travel speed.
- Braking whilst travelling is achieved by releasing the drive switch or by plugging. The remotely excited motor acts as a generator and is used to recover energy when braking.
- When starting on a gradient the controller and the drive come immediately into effect to prevent uncontrolled rolling back.

Mast.
- Clear view mast in telescopic, telescopic with special free lift and Triplex versions.
- Narrow mast design gives clear visibility past the mast which means greater safety when stacking and destacking, even with very high loads.
- Nested I-beam mast sections are fitted with inclined mast rollers and the lift chains run behind them, to give a clear view onto the roadway and the load.

Hydraulic system.
- Enclosed motor drives a high pressure gear pump.
- Hoist and lowering speeds are regulated by depressing the corresponding button.
- Fully proportional hydraulics are achieved by electronic control of the pump motor speed.
- Maximum pressure valve, lowering control valve and hose burst safety valve protect the hydraulics.

Initial lift.
- Increases the floor clearance to 140 mm (115 mm lift) making it possible to drive over uneven floors and changes of gradient.
- Makes use as a low lift pallet truck possible for an open pallet up to a maximum weight of 2000 kg.

Brake system.
- The electromagnetic disc brake system is protected from dirt and acts both as a safety braking system and a parking brake. The drive controller takes control of the brake, operating on the motor shaft, with simultaneous actuation of the electromagnet and shut off of the drive current. Braking is automatic when the tiller is horizontal or vertical (deadman braking).

Battery.
- Mounted on a roller track, the battery can be changed by pulling out to one side or lifting with a hoist.
- The battery hood, manufactured from extremely strong, impact-resistant polyurethane, can be removed without tools, facilitating battery inspection and maintenance.
- Combi-instrument displaying battery state of charge and operating hours is fitted as standard.

Auxiliary equipment.
- Initial lift available on the long chassis version.
- Load backrest.
- On-board charger.
- Travel speed limit from \( h_2 = 2000 \text{ mm} \).
- Cold store version to \(-30 ^\circ \text{C} \).
- Intermediate lift limit.
- Lift height gauge.

Safety.
- Trucks are built to the Machinery Guidelines 98/37/EC and carry the CE symbol.
- Still is certified to ISO 9001.
This specification sheet to VDI Guidelines 2198 only gives the technical figures for the standard truck. Different tyres, other masts, additional equipment etc. could give different figures.

### Notes

1. With limited free lift.
2. With full free lift.
3. With load backrest + 490 mm.
4. With tiller vertical - 45 mm.
5. Maximum gradeability related to truck geometry unladen.
6. Data related to mast with h 3 = 3580 mm.
7. Data related to mast with h 3 = 3580 mm.
8. With 315 Ah battery.
9. With Triplex mast and full free lift.
10. With Duplex mast h 3 = 3580 mm and min. rated battery capacity (see battery weight Line 6.5).
11. Data related to wheel arms not raised (h 5 = 0 mm).
12. Data related to wheel arms raised (h 5 = 135 mm).
Pedestrian high lift pallet truck.

EGV 20 Duplex and Triplex.

Height = $h_3 + h_{13}/10$ = 570 mm
Pedestrian high lift pallet truck EGV 20.

Model.
The EGV has been specially developed for arduous workloads involving putting goods into and taking them out of stock at medium lift heights.

Chassis.
- The construction, with four support points and the tiller fitted at the side, guarantees high stability with a perfect view of the load when picking up and placing a pallet at height.
- The drive unit and the support wheel remain within the truck frame, so that the driver’s feet are better protected.
- The battery compartment is protected all round by steel sheets and designed for DIN batteries. As standard the battery is pulled out from the side.
- The covers are made of impact-resistant heavy duty polyurethane and possess high strength and elasticity enabling them to absorb heavy impacts without deformation.

Tiller.
- Comprises a new tiller head made as a single high-strength plastic moulding, and tiller arm in oval profile tube.
- The shape and fixing of the tiller are designed so that it can be operated comfortably by any size of person.
- The lightness of the tiller and its ease of operation enable the pallet truck to be used over a long period without operator fatigue. When the tiller is released it returns to the rest position without impact or kick-back, making for a safe working environment.
- Proportional control of the hoist and lowering movement, using a control on the tiller is provided as standard.

Drive.
- Shunt wound drive motor with a rating of 1 kW.
- The support wheel has a simple adjustment mechanism, guaranteeing optimal tyre grip and stability of the pallet truck under all conditions.

Mast.
- Duplex and Triplex masts are available, giving the best all-round vision; lift heights over 4300 mm.
- The masts are available with limited free lift, or full free lift of the forks.
- The hydraulics use a powerful 3 kW motor.

Initial lift.
- Increases the floor clearance to 135 mm making it possible to drive over uneven floors and changes of gradient.
- At the same time allows a pallet with a maximum weight of 2000 kg to be handled.

Brakes.
The high lift pallet truck has two independent braking systems:
- Service brake; generator brake operating on the drive motor (with energy feedback) and triggered electronically by releasing the driveswitch.
- Parking brake: electromagnetic brake disc.

Electronic system.
- 24 volt DC supply.
- Electronic MOSFET combi-controller for drive and pump motor.
- The work hour meter incorporates an error message display.
- The new electronic system guarantees low energy consumption and quiet operation of the pallet truck. The control system prevents current peaks and thus protects the motors and the battery from premature wear.
- All electrical systems and cabling are to Enclosure Class IP 54 and protected against water splashes and the ingress of dust, guaranteeing years of reliability. Components from the automotive trade with an Enclosure Class of IP 67 are used for the connecting plugs.

Options.
- Cold store version: -30 °C.
- Integral 50 A charger.
- Adjustable forks in L shape.
- Load backrest.

Safety.
Trucks are built to the Machinery Guidelines 98/37/EC and carry the CE symbol. STILL is certified to ISO 9001.
Pedestrian high lift pallet truck with hinged platform.

The new high lift pallet truck, with hinged driver’s platform and side protection arms, has been developed with the objective of achieving the best possible safety and ergonomics. Thanks to the use of reliable and proven technical solutions, the new EGV-S is an extremely reliable and productive machine, especially under difficult application conditions.

Chassis.

The EGV-S has 4-point wheel support: the rigidly mounted drive unit, arranged to one side, with a castor wheel. This configuration guarantees the stability and high residual capacity that are essential properties of a high lift pallet truck. The motor compartment is fitted with a strong and resilient polyurethane cover, with very high impact resistance. The same material is used for the battery compartment cover, which features an integral storage tray and a document clip. The battery is changed with a hoist, but can also be removed from the side. Both options are included in standard specifications. Batteries with a capacity of up to 360 Ah can be used.

Mast.

Two capacities are offered: 1400 kg and 2000 kg. There is a wide range of masts to choose from: SIMPLEX, DUPLEX (with and without full free lift) and TRIPLEX (full free lift) masts, all offering excellent visibility. Masts are available with lift heights over 5300 mm (EGV-S 14) or over 4300 mm (EGV-S 20).

Tiller.

Two butterfly switches integrated into the tiller head control the lift and lower functions. They operate a proportional valve and thus guarantee sensitive lifting and lowering. The tiller is manufactured as one lightweight, high strength plastic moulding. Thanks to the ergonomic handle design and the optimised arrangement of the controls, the high lift pallet truck can be accurately steered and safely operated under all conditions. The switchgear uses proven and reliable membrane technology, which does away with mechanical contacts.

Driver’s stand-on platform.

The platform surface is fitted with a soft rubber material with a non-slip surface, which guarantees the highest comfort and best possible safety. The platform step height is a very low 170 mm. Safety is built in to the design: as soon as the operator steps off the platform, it lifts, the truck goes into standby mode and cannot be driven. The specially shaped protective side arms are encased in polyurethane foam and positioned at an ideal height to provide the operator with safe, comfortable and effective support when standing on the platform. Opening and closing the arms is quick and easy while being very safe and secure – thus providing an uncomplicated transition from stand-on to pedestrian mode and increasing the versatility of the truck.

Steering.

To keep the steering as light as possible, the tiller is power assisted. The force required for steering increases in proportion to the speed of the truck. When travelling round bends, the travel speed is automatically reduced – improving safety and maintaining lateral stability.

Drive.

The drive is provided by a motor with a rating of 1.2 kW. The motor is of the shunt-wound design and special software allows it to be controlled in such a way that the benefits of shunt wound technology are harnessed to maximum effect:
- Effective and safe control of the speed, whether laden, unladen or on ramps.
- Energy recovery, leading to reduced energy consumption.

Initial lift.

- Increases the floor clearance to 135 mm making it possible to drive over uneven floors and changes of gradient.
- At the same time allows a pallet with a maximum weight of 2000 kilogrammes to be carried.

Brakes.

The high lift pallet truck has two independent brake systems:
- Service brake: generator brake operating on the drive motor (with energy feedback) and triggered electronically by releasing the driveswitch.
- Parking brake: electromagnetic brake disc.

Combi-controller for driving and hoisting.

The high lift pallet truck is equipped with a combi-controller with MOSFET technology, which is responsible for the control of both drive and pump motors. Thanks to the serial data transfer of the electrical signals, the reduced wiring and the use of automotive-style plugs, very high reliability levels are achieved. Proximity switches are used instead of mechanically operated micro-switches and this, together with the low number of switching contactors, completes a technical configuration designed to provide a dramatic reduction in operating costs. The steering motor control uses MOSFET technology.

Options.

- Various mast variants.
- Cold store version: -30 °C.
- Drive wheel in smooth rubber (EGV-S 14 only).
- Adjustable forks (L shape) (EGV-S 14 only).
- Tandem load rollers (EGV-S 14 only).
- Load backrest.
- Integral 50 A charger.

Safety.

Trucks are built to the Machinery Guidelines 98/37/EC and carry the CE symbol. STILL is certified to ISO 9001.
Different tyres, other masts, additional equipment etc. could give different figures. This specification sheet to VDI Guidelines 2198 only gives the technical figures for the standard truck.
